WORK EXPERIENCE

Game Tech Lead
Beat The Bomb

Nov. 2024 – Jan. 2026
Charlotte, NC

- Monitored and debugged distributed systems powering live interactive experiences, resolving system failures in real time
- Collaborated with engineers to reproduce bugs, validate fixes, and deploy infrastructure updates across environments
- Analyzed system logs to identify recurring failures and implemented fixes to improve system reliability
- Led and trained 5+ technicians as the escalation point for complex production issues

Web Developer
ScarletIbis Charters

Aug. 2024 – Oct. 2024
Fort Mill, SC

- Built a responsive booking website for a yacht charter business, improving booking flow and user experience
- Developed and deployed a web app using JavaScript and TailwindCSS, improving reliability and performance
- Implemented a contact form with backend email handling to streamline customer inquiries
- Collaborated directly with the client to gather requirements, iterate on UI/UX, and deploy production updates

Software Engineer
Catawba Area Agency on Aging

Aug. 2022 – May 2023
Rock Hill, SC

- Built a C# (.NET) desktop application and SQL backend to streamline nonprofit data entry and reporting workflows
- Designed and optimized relational database queries to improve data retrieval performance and accuracy
- Collaborated with stakeholders to translate operational requirements into implemented software features
- Improved application usability by refining workflows and reducing friction in daily administrative tasks

Audio Engineer
Transformation Church

June 2017 – Jan. 2019
Indian Land, SC

- Engineered broadcast audio for live streams, delivering high-quality sound for thousands of online listeners
- Supported live audio infrastructure upgrades including routing, signal flow optimization, and system setup

PROJECTS

Mix Feedback & Analysis Web App
React, Supabase (PostgreSQL), Web Audio API, WaveSurfer.js, audioMotion-analyzer UnoCSS

- Built a full-stack collaborative audio analysis platform for uploading, playing, and annotating audio in the browser
- Implemented waveform visualization and timestamped annotations using WaveSurfer.js and audio analysis libraries
- Built modular audio analysis tools including EQ, LUFS loudness metering, peak detection, and spectral analysis
- Designed authentication, storage, and shareable links using Supabase (PostgreSQL) with token-based access

Spider Solitaire Roguelike (Custom C++ Game Engine Project)
C++, OpenGL, GLFW, GLAD, Dear ImGui, CMake

- Built a fully interactive Spider Solitaire game in C++ using OpenGL for real-time rendering and custom game logic
- Implemented engine systems including card movement, drag-and-drop, and rule enforcement across difficulty modes
- Built rendering pipeline with shader management, texture loading, and animation systems using OpenGL
- Integrated UI system using Dear ImGui and audio/asset loading via stb_image and miniaudio

SKILLS

Languages: JavaScript, TypeScript, SQL, C++, Lua
Audio: Web Audio API, JUCE, signal processing, audio engineering
Frontend: React, TailwindCSS, Solid, Vite
Backend: Node.js, Express.js, PostgreSQL, Supabase
Tools: Git, Docker, Playwright, Vitest, Yaak

EDUCATION

Winthrop University - Bachelor of Science in Computer Science (May 2024), Bachelor of Arts in Music Technology (Dec. 2023)
